

PREMIUM VLIES 160

Fleece for covering straw bales and grain

- also for potatoes, sugar beet, compost etc.
- protects from dirt, bird droppings and other environmental influences
- fabric with 160 g/m² (on average)
- tear and tension resistant
- 5 years UV-stable at max. 110 kLy
- made of high-strength PP staple fibers, without adhesives and chemical binders
- offers no resistance to the wind, thus avoiding the classic „sailing“ effect
- soft, cuddly roll fabric, easy to handle
- breathable and water-repellent
- color tone fits perfectly into the environment

Laying instructions

- Align bale stack and fleece in the direction of the wind.
- Must be laid with an inclination of at least 45° to allow effective drainage of water from fabric.
- We recommend to place the lowest layer of straw bales on pallets or similar material to avoid direct ground contact.
- Tighten the fleece and fix it securely over the entire period of use.
- Cover only dry crop, no warranty can be accepted in case of improper use/stacking!
- Heavy rain or prolonged periods of rain can lead to soaking! This can delay drying.
- Important note: To ensure proper storage, follow the instructions for installation. Avoid contact with products containing sulfur, copper, iron or chlorine. The product is not waterproof and not fire resistant. No assumption of liability for misuse of the product.
